

What is claimed is:

1. A method for processing an account information using a network, said method comprising step for:

5 constructing central server system in which a central server is provided for controlling the following steps, and a database is constructed with a customer information such as an information of a customer who provides an account work, an account work amount, etc., and an part time worker information such as an information of an part time worker who request a process of account work, an account knowledge state of an part time
10 worker, etc. wherein said database cooperates with the central server;

constructing a website in which a website cooperating with the central server is constructed;

verifying in which a customer or part time worker is verified in such a manner that a customer information or part time worker information registered and stored in the
15 database is compared with a customer or part time worker information inputted when a customer or part time worker is connected with the website;

listing an account work in which a customer stores an evidence document image information needed for a process of an account work into a customer server, and an account work is listed for requesting the same on the website;

48

requesting an account work in which the part time worker is connected with the website and requests an assignment of the account work listed on the website;

selecting an part time worker in which the part time worker is selected for distributing the customer's account work listed on the website; and

5 storing an part time worker's account information in which the selected part time worker is connected with the customer server using an part time worker's terminal and converts the evidence document image information into an account information using the account process program and stores the same.

10 2. The method of claim 1, wherein said the step for storing aribiter's account information includes:

the step in which the part time worker is connected with the customer server, and the account process program is driven;

15 the step in which the evidence document image information stored in the customer server is converted into an evidence document text information by an evidence document recognition program; and

the step in which the account process program lists the contents of the evidence document text information and generates an account information.

49

3. The method of either claim 1 or claim 2, wherein said the step for verifying customer includes the step for providing a customer identification (ID) number in which the central server generates a customer ID number and provides to the customer for preventing a revealing of the customer information.

5

4. The method of either claim 1 or claim 2, further comprising the step for reviewing an account information in which the customer reviews the account information stored by the part time worker using the account process program.

10 5. The method of claim 4, further comprising the step for correcting an account information in which as a result of the review of said account information review step, when there is an error in the account information, the error in the account information is corrected using the account program and is stored.

15 6. The method of claim 5, further comprising the step for re-listing an account work in which as a result of the review of the account information review step, when there is an error in the account information stored by the part time worker, the customer lists the account work as a new account work on the website.

50

7. The method of claim 4, further comprising the step for an electronic payment in which the central server that receives a completion of the account work from the customer server requests a cost payment to the customer server through the network, so that the cost payment is performed.

5

8. The method of claim 7, further comprising the step for determining an part time worker level in which the central server determines an part time worker's level based on an information concerning an part time worker's account work process performance, an account knowledge state, etc.

10

9. The method of either claim 1 or claim 2, wherein said evidence document image information is a digital image file produced in such a manner that a tax bill, credit card receipt, temporarily tax bill, cash register receipt, etc. which are needed for a common account process are scanned using a scanner or are photographed using a digital camera.

15

10. The method of either claim 1 or claim 2, wherein said account work is converted into one account information file in such a manner that the part time worker lists a plurality of evidence document image information stored in the customer server into an evidence document text information using the account process program for thereby generating one

51

account information file.

11. The method of claim 10, wherein in said account work, the listed evidence document text information is account-processed based on the journal form of the account process for thereby generating an account process information.

12. The method of either claim 1 or claim 2, wherein said account process program provides an account work screen on the part time worker terminal, and said work screen includes an evidence document image information region, an evidence document text information correcting region, an evidence document text information list, and an account process region.

13. The method of either claim 1 or claim 2, wherein said the step for converting the evidence document image information into an evidence document text information; further comprising the steps for:

recognizing the positions of items such as date, company name, money amount, applications, etc. needed for the account work;

recognizing form lines and text portions in the above position;

recognizing the text portions and a background portion;

52

thinning by expressing the text portions formed of a thick line into a single line representing the shape; and

analyzing the motion and shape of the single line and reading the text.

- 5 14. The method of either claim 1 or claim 2, wherein said step for selecting the part time worker, a customer's desired account work completion time and the amount of the account work are compared with the part time worker's account work processing possible time and work time for thereby selecting an part time worker who can do the account work.
